SPRING SEAT CHANGE

Hutchens Industries has created a new series of underslung / no-hop spring seats. These seats do not have a formed back. Instead, the side plates are straight and the internal tie plate serves as the ends of the seat. This matches the design of our standard spring seats with the radius rod attaching ears. Installation remains the same. The figures below illustrate the differences.

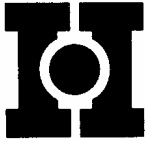

On the next page is a part number cross reference of old style to new style seats.
