

Advancing the Practical Application of Suspension Technology

ENGINEERING BULLETIN

March 2013

Radius Rod Change for 97" – 121" Widespread Applications

Effective immediately, Hutchens Industries will supply one fixed radius rod and one adjustable radius rod for each axle of the widespread suspensions in 97" – 121" axle centers for 5" round axles. Previously two adjustable rods were supplied for the rear axle. This change is consistent with other suspension configurations that use the 19-1/4" radius rods and will aid in our commitment to keep prices as low as possible for our customers.

Should you have any questions regarding this bulletin please contact Hutchens Industries at 1-800-654-8824.
