The Difference is Durability. The Quality is Hutchens.

Hutchens Industries

Corrosion-resistant individual hanger towers provide vertical load support.

1/2'' wear pads with drain holes in spring hangers extend service life and reduce corrosion.

9" deep 76 KSI minimum-yield steel C-channel side rails with optimal flange contours to resist corrosion.

Patented EZ-Pull 2 Pin Release System for simple repositioning.

NEVER-SEEZ® coated torque arm screw resists corrosion while allowing easy adjustment for suspension alignment.

Roll formed top plate that offers great stability under U-Bolt clamp loads.

Series 10/9700

SLIDING SUSPENSION SYSTEM

- The Hutch Series 10 slider with 9700 hybrid suspension hangers was developed as a light-weight, extremely durable sub-frame and suspension system.
- This slider system combines new design concepts with lighter weight materials, advanced welding and assembly techniques.
- Developed for dry van and refrigerated trailers, the Series 10 production process ensures consistency in the final product, and the lowest total cost of ownership.
- Every Series 10/9700 sliding suspension system is backed by a 10 year warranty.

Large diameter lock pins and heavy-duty hold down clips resist braking loads and sliding forces.

Improved spring seat design that efficiently transfers forces from the axles to the springs. Now available for large diameter axles.

Full-depth crossmembers provide optimal lateral support.

Huck® fasteners used at high-stress crossmember attachments.

> Designed for reduced frame stresses and maximum durability at impact zones.

Lower-profile hybrid hangers reduce frame stresses.

Wide center hanger footprint increases frame and hanger life.

Maintenance-free Huck® fastened rocker connection with Million Mile Rocker Bushing.

Wrapped fabricated torque arm eye-ends prevent separation under extreme conditions.
